Data Migration Software

Investigate · Evaluate · Define · Design · Test · Activate · Audit

Imagine your entire data migration team working within a single solution, driving your project forward with complete visibility and transparency. The whole process simplified with built-in Machine Learning (ML), the best practices in thousands of projects, and 97.9% user satisfaction rate. More than an intelligent data migration tool, we have 40 years of collective experience in best practices, backed up.

What are the benefits to data migration software?

- ✔ Single source of truth. Data is segregated and departments are operating on incomplete information without a single source of truth.
- ✔ Raise the standard of your data. Data can be confusing. We have the chance to clean, transform, and deduplicate data throughout the data migration process, which produces data of greater quality.
- ✔ Make data driven decisions based on reliable data. Validate and take action before committing to important processes and operations.
- ✔ Expedite the time to insight. It takes time to manually gather data from several source systems. We can consolidate all of our data into a single storage system, such as a cloud data warehouse, data lake, or lakehouse, by using data migration.

Interested in a little help? Our experts support you in every decision related to data rules, business processes, team members, roles, mappings and many more.

We also provide immediate post-migration consulting for your data governance projects (MDM), data warehouses, and on-premise or cloud based data lakes.

Why is data migration important?

Agility: we must be able to transfer data between various platforms and applications. With data transfer, your company may remain flexible and avoid being dependent on one or more platforms or vendors.

Lower Expenses: Your data can be moved to a cloud data warehouse using an ETL tool, which can reduce the cost of data storage.

Increased Cooperation: Departments can collaborate more effectively and gain visibility into what's happening throughout the company by tearing down data silos.

Save up to 80% of time spent on V Look Up, SQL Scripts, Python, R in Clicks!

Data migrations are carried out by organizations for a variety of reasons. They might need to replace databases, create a new data warehouse, redesign a whole system, or combine fresh data from an acquisition or another source. Data migration is also required when installing a new system with current applications.

How can our data migration tool CUBO iQ® help you?

- ✔ Designed to be used by anyone, not just IT staff (Data Analysts, Data Scientists, Business Leaders, Administrators, Executives, Marketing and more!)
- ✔ Import existing business rules and use our smart dictionaries for quick implementation and pick up where you left off.
- ✔ Combine various sources of disparate data, internal and external, into a single source of truth and get a holistic view of your data.
- ✔ We automate processes with proprietary algorithms to help save time and increase efficiency.

Are you ready to move all those moving data points?

Completely transform the way you view your data! Take your data quality initiative to another level today! Freemium version available.
